

VERSATILE SOLUTIONS

▲ +91 86575 02979

Terrace / Roof Specialist
**We maximise the performance
and life span of your roof**

Our belief in executing excellent services to customers has led us to a respected place in this sector. Every operation is executed by a trained team of professionals to deliver value to our client.

UNIQUE SOLUTION PROVIDER

ABOUT US

WHO ARE WE

Since the inception in this field, VERSATILE SOLUTIONS is recognized as a prominent waterproofing & civil contractors originally established in October 2011. Our Company is capable enough to complete any project ranging from commercial, residential & individual jobs. Moreover, we also undertake jobs involving entire civil work includes plumbing, electrical, POP, internal & external painting, total furniture work, etc. Our company is professionally managed by a group of experts possessing business acumen.

SERVICES

WATER PROOFING

Specialist for high technology waterproofing services. Our professional will give a one-time stop solutions.

FLOORING

Flooring Service offered is rendered by our specialists utilizing the ideal quality devices and propelled.

PAINTING

We are professional in both exterior and interior paintings to make your place more beautiful.

ANTI-FUNGUS TRANSPARENT SEALER TREATMENT

Chemical treatment on the building substrates to prevent ingress of moisture and dampness inside the building, thereby protecting the paint from fungs attack and preserving the aesthetics of the building for a very long time.

COATING

We convey unparalleled help and coatings determination backing to meet our client's coatings needs.

SURFACE TREATMENT

We are offering top notch Surface Treatment Services in different altered and measures terms to meet client's need.

REPAIR & RESTORATION

Repair & Restoration of Residential, Commercial & Individual Sectors.

WE ARE IN

EPDM Membrane Waterproofing

One of our most admired and a valuable service is EPDM Membrane Waterproofing. This Membrane has a result of a unique combination of latest technology. EPDM membrane (ETHYLENE PROPYLENE DYSMERIC) which will surely satisfy your waterproofing needs. Durable and weatherproof single-ply waterproofing membrane perfect for a wide variety of applications. This is fast and easy application membrane. This membrane has excellent elongation to absorb all structural movements. Some of the features of these membranes are highly elastic, long lasting, Resistance to roots and fungus. With high tensile strength the membrane is extremely flexible and pliable to adapt to contours.

ADVANTAGES:

- Excellent weather ability
- Impermeable to water
- Easy to Install cool method
- Durable (Warranty for a period of 10yrs)

AREAS OF APPLICATION:

- Roofs
- Terrace
- Planter Areas
- Toilets
- Expansion Joints
- Podiums
- Swimming pools
- Internal vertical walls

Expansion and Construction Joints With EPDM Membrane

In buildings of longer spans or where a new building is extended from the existing old building, an expansion joint is to be provided all round and filled with a movement accommodative Membrane. In case of failure of these joints, rain-water can enter through these and cause damage. EPDM MEMBRANE application is essential to every Expansion joints of the bldg; it withstands movements of the structures the membrane will not tear, crack or split. It has an unfailing flexibility. EPDM Membrane can withstand temperature from -40° to +140° it has an elongation upto 400%

METHOD:

Backing rod in between the joint
Admixture of DMC & Marble Quartz sand over the backing rod
Primer coat over the slab
Adhesive over the Primer coat
EPDM Membrane above the primer
Seamless Tape at the above end joints of the EPDM
Hardening with Marble quartz sand/ black Retie

HORIZONTAL

Chemical Waterproofing

We offer Terrace Waterproofing Service, which involves following steps:

- Crack filling of existing terrace
- Applying polymer coating in three to five coats, as per surface condition
- Glass Fabric & Screeding with Marble quartz sand acting as bonding agent between the two substrates. (if required)

VERTICAL

Anti-Fungus Transparent Sealer Treatment

Due to acidic nature of rain water, the natural binder of mineral substrate is solubilised and leaches out, causing increased porosity of the substrate. Water falling on the surface is immediately absorbed and the amount of water absorbed is quite high. This absorbed water is transported by capillary action to the inside and prone to cause spalling of inside plasters and peeling of interior paints. Dampness nourishes the growth of moss and fungus on the surface causing black patches. We specialize in impregnation of such type of surfaces by making them hydrophobic, as a result of which, the surface does not absorb water and condensation inside the capillaries is prevented. Consequently, by preventing the ingress of water carrying hygroscopic salts that cause efflorescence, it means free from moss and the surface is fungus sealed.

AREA OF APPLICATION:

- Concret (Fresh or carbonated)
- Clinker Masonry
- Ceramic Tiles
- Bricks Cladding
- Natural Stone
- Cement Render
- laterite masonry surface

Injection Grouting with Crystalline Waterproofing

Provided by us are services of Injection Grouting to the Surface. The nozzles will be fixed, through these nozzles, cement slurry & VS-16 which is crystalline waterproofing shall be injected with hand pump. Thereafter, the nozzles are plugged using new shrink grout. The grouting process meticulously seals the pours and capillaries and hence, increases density and compressive strength of the concrete.

Water Tank Waterproofing

Our water tank waterproofing service includes internal waterproofing for over head waterproofing tank and external wall waterproofing. In internal waterproofing for tank, we cover the entire internal layer of the tank with FOOD GRADE quality coatings along with cement mortar. This follows methodology that includes, curing and preparatory work such as hacking out loose surface. In external wall waterproofing, we apply one coat of primer and two coat of Elastomeric Waterproofing Paint on the prepared surface as per approved shade and color to avoid leakage of water.

Seamless Tape Waterproofing

These are Self -Adhesive tape made of a Butyl & Bitumen Rubber Compound, Self Protected by re-enforced Aluminum Foil on one side and Adhesive side is protected by Release Film. Flash Strip® is a simple yet highly effective solution for waterproofing, sealing and insulation. Roofs – around chimneys and skylights and roof cladding.Exterior walls – joints and cracks in asbestos cement sheeting and also the galvanized sheet joints & nut-bolts..

Plastering

internal & External Plastering.

POP Work

POP work for the internal vertical walls

Elastomeric Paint

Elastomeric Paint is used to provide maximum flexibility, high tensile strength and high elongation. It is having excellent water resistance quality. This coating is UV resistant and is equally suitable for porous and nonporous surfaces. Water can run the interiors of buildings and can downgrade its asset value thus, it is very essential to protect buildings from its destructive affects. Understanding this, we provide our clients with most reliable and effective waterproofing solutions. Elastomeric Waterproofing Paint is decided as per approved shade and color by the clients to avoid leakage of water.

Decorative Pavers

We also offer latest design Decorative Pavers. Extensively used in number of buildings like offices, institutes, hospitals, residential apartments and hotels and resorts, these are highly durable and strong. These pavers not only provide strength to the floor but also increase the beauty. Attached together with super strong adhesive materials, these pavers are water and weather proof. These are low maintenance pavers.

Tiling along with Epoxy & Cement Grouting

EPOXY GROUTS are Hygienic, hard-wearing, impervious, epoxide resin-based ceramic tile grout with a high degree of resistance to chemical attack, abrasion and impact. The cured grout does not transfer taints to foodstuffs, does not permit the entry of bacteria or dirt and is easily maintained in a sterile condition. CEMENT GROUTS are high quality fine, water – resistant, cement – based powder grout designed for grouting glazed wall tiles, mosaics, vitrified & fully vitrified tiles, ceramic floor tiles, industrial floor tiles, etc

QUALITY ASSURANCE POLICY

With years of enormous experience Versatile Solutions has produced superior results in application of waterproofing with higher standards. We ensure the quality by specialized and professional team and monitoring the work progress with strict quality control process of workmanship as per the manufacturers application systems. Our quality management system is of national/international standards and it has contributed to the growth and success in the field of waterproofing and maintenance. The team of qualified workers are professionally well trained and skilled in all aspects to carry out the projects in proficient way. Our Company is more conscious about an individual safety as well as personnel Safety, which is strictly followed on national/international standards.

QUALITY CONTROL

Work be carried out in accordance with relevant specifications, codes of practice and as per the membrane manufactures instructions. Handling of all materials storage of membrane shall be in strife conjunction with manufacture instruction all materials shall be safely stored in covered areas not exposed to direct sunlight. If the materials to be used in the project are damaged by improper handling and storage, they shall be removed from the site as to consultant's instructions all materials shall be indicating the name, size, type of material, manufacturer's data etc. No traffic shall be allowed on the completed waterproofing works unless a clearance is issued by our technical team, the installed waterproofing works shall be protected against any damages by others. Prior to commencement of works we assure a site co-ordination meeting in presence of consultants and main contractor to discussed method of statement of waterproofing works. Our QC team monitoring all aspect the work.
